### **INSTRUCTIONS TO BIDDERS** **SNOW REMOVAL AND SANDING REQUIREMENTS**

Areas to be plowed are the parking areas on the East and West sides of the building, the parking area at the front of the building, and the ramp area in front of all apparatus bay doors.

Snow on the area in front of the building shall be plowed East and West and then pushed from the North to the South and off the embankment at the rear of the building.

Snow on the East and West sides of the building shall be plowed from the North to the South and off the embankment at the rear of the building.

Snow shall not be plowed or pushed onto the land of abutting property owners under any circumstances.

Snow shall not be piled at any time so that it could restrict visibility or access to Route 44. All snow shall be pushed back as far as possible for future snow events.

Snow plowing shall begin when the depth has reached 3", and then plow as necessary.

All snow in front of apparatus bay doors and other entrances to the fire station, shall be **shoveled clear**.

After the snow storm has cleared and final plowing/shoveling has been completed, the entire parking lot shall be **sanded as necessary**.

In the event of a freezing rain or ice storm, the parking lot and ramp areas shall be sanded as necessary **during** the storm to facilitate the safe arrival of firefighters at alarms and the safe response of apparatus.

Any questions on the above requirements should be directed to Chief Richard A. Waterman. The Chief can be contacted at the fire station Tuesday through Friday, between the hours of 8:00 am & 3:00 pm, (401) 949-1188.
